PROFESSIONAL EXPERIENCE

Aug. 2021 – Jun. 2026 | TEKAB.DEV

Project 1: Project Management and Collaborative Workflow Platform

Full-Stack Developer

Description: A collaborative platform for development teams to streamline project management and integrate artificial intelligence. It offers three main modules: automatic generation of specifications, creation of custom AI agents, and a Kanban board for task tracking.

Responsibilities:

- Developed an interactive chatbot and integrated AI agents to automatically generate functional specifications and the product backlog.
- Built a catalog allowing users to configure, publish, and clone custom AI agents along with their skills.
- Developed and published the command-line tool (devfactory-cli) on the NPM registry to install agents locally from the terminal.
- Designed serverless APIs with Hono.js (Cloudflare Workers), modeled the database with Prisma, and configured storage on Cloudflare R2.
- Built smooth, responsive user interfaces with Next.js, Tailwind CSS, and Shadcn UI.
- Set up GitLab CI/CD pipelines to automate deployment to Cloudflare and automatic CLI publishing.

Technologies: React, Hono.js, Prisma (ORM), Vercel AI SDK (OpenAI, Claude, Gemini), Node.js (CLI), Cloudflare R2, GitLab CI/CD, Tailwind CSS, Shadcn.

Team: PO, Scrum Master, Designer, Tech Lead, 3 Full-Stack Developers.

Project 2: URJOB – AI-Assisted Recruitment Platform

Full-Stack Developer

Description: An AI-assisted recruitment platform for consultants and recruiters. It automates the entire recruitment process, from CV and job posting analysis to candidate matching and selection. The platform relies on advanced matching algorithms to analyze technical skills, soft skills, and career preferences in order to propose highly relevant assignments and candidates. It also integrates AI evaluation tools (technical tests, virtual interviews), an automated application workflow, and an intuitive pipeline/Kanban management interface, delivering significant time savings and improved recruitment quality.

Responsibilities:

- Developed the Frontend with Vue.js (component-based architecture, Composition API, state management).
- Implemented responsive UX/UI interfaces: dashboards, Kanban pipeline, dynamic forms, and real-time views.
- Integrated Backend APIs and AI webhooks for automatic analysis of CVs, job postings, matching....
- Developed high-performance NestJS Backend APIs with cache management and optimized queries for fast data processing.
- Progressively migrated the Frontend application from Vue.js to [Next.js](#)
- Containerized the application (Docker) and automated deployments with GitLab CI/CD pipelines.

Technologies: NestJS (Backend), Vue.js (Frontend), Next.js (Frontend), Prisma (ORM), Pinia (state management), Supabase (Backend as a service), PostgreSQL (database), Docker (containerization), GitLab CI/CD (continuous integration and delivery), Cloudflare R2 (secure file storage), Shadcn-vue, Tailwind CSS, etc.

Team: PO, Scrum Master, Designer, Tech Lead, 3 Full-Stack Developers.

Project 3: ZorLife – Mobile Application to Motivate Users on Their Wellness Journey

Team Leader

Description: “ZorLife” is a mobile application built with React Native, designed to inspire and motivate users on their wellness journey through a personalized experience and engaging gamification features. The app offers precise physical activity tracking, a fully customizable virtual 3D character, reward badges, and a social ranking system to encourage engagement and healthy competition. It also includes motivational push notifications, exclusive offers, and access to educational health and wellness content.

Responsibilities:

- Coordinated a technical team of 3 developers and a 3D designer to ensure smooth delivery and meet deadlines.
- Published the application on the App Store and Google Play, and managed over-the-air updates for quick adjustments.
- Presented project progress to clients during meetings, gathered feedback, and proposed suitable solutions.
- Maintained the application during closed testing and integrated new features based on tester feedback.

Technologies: React Native (Frontend), Redux (global state management), Hono (Backend), Prisma (ORM), Docker (containerization), Cloudflare D1 (distributed database), Cloudflare Workers (serverless), Stripe (payments), Three.js and react-native-filament (3D), Firebase (tracking).

Team: PO, Scrum Master, Designer, Tech Lead, 3 Full-Stack Developers.

Project 4: Bloom – Mobile Application and Admin Dashboard

Team Leader

Description: “Bloom” is a complete solution for creating personalized keepsakes, comprising a mobile application and an admin dashboard. The mobile app, built with React Native, lets users design keepsakes in the form of books or boxes, customizing themes, colors, and templates through intuitive drag-and-drop features. Users can import photos from their device or Google Photos, customize their creations with a built-in image editor, then finalize and order their products via Stripe and Chronopost. Firebase is integrated to enhance the user experience through analysis of choices and interactions. The admin dashboard, built with Vue.js, allows management of user creations, validation of creations before printing, and user follow-up through a reminder system. It also includes a personalized notification system via Expo Notifications to keep users engaged and encourage them to finalize their creations.

Responsibilities:

- Supervised a team of developers and coordinated efforts to ensure deadlines and quality standards were met.
- Developed the core features of the mobile app and the admin dashboard.
- Integrated third-party services, including Stripe, Chronopost, and Firebase
- Set up CI/CD pipelines using Docker and GitLab CI/CD.
- Published the application on the App Store and Google Play, and managed over-the-air updates for quick adjustments.
- Provided technical support in production and integrated new features based on user needs.
- Communicated project progress to clients during meetings, gathered feedback, and suggested solutions.

Technologies: NestJS (Backend), React Native (mobile), Vue.js (Frontend), Prisma (ORM), Pinia (state management), Supabase (Backend as a service), PostgreSQL (database), Docker (containerization), GitLab CI/CD (continuous integration and delivery), Cloudflare (security and DNS management), Cloudflare R2 (secure file storage), Python (image processing).

Team: PO, Scrum Master, Designer, Tech Lead, 3 Full-Stack Developers.

Project 5: Obydo – Web Application for Managing Unsold Goods

Frontend Developer

Description: Obydo is a web application designed to help businesses manage unsold goods, whether new or used, by offering solutions to sell, donate, or recycle them. The system allows businesses to create auctions for their unsold products and fill in the corresponding information. Customers can then browse these auctions, fill in their information, and participate by bidding on products. When an auction ends, if the product hasn't sold, it is converted into a donation or recycled. Charities can also recover these unsold items, in compliance with French laws on the management of unsold goods. Payment is processed via the MANGOPAY solution to ensure transaction security.

Responsibilities:

- Developed the application's user interfaces.
- Built modules allowing businesses to create and manage their auctions, and customers to participate by bidding.
- Integrated a module for role and permission management.
- Integrated the APIs needed for payment management via MANGOPAY, sending product and auction information, and invoice generation.

Technologies: Vue.js (Frontend), Vuex (state management), Docker (containerization), Pusher (real-time), Vuetify, Git, Monday.

Team: PO, Scrum Master, Designer, Tech Lead, Backend Developer, Frontend Developer.

Jun. 2021 – Aug. 2021 | Sastec**Project 1: Webinarplease – Video Conferencing Application****Frontend Developer**

Description: Webinarplease is a video conferencing application developed to facilitate the organization of online meetings. The app offers advanced features such as screen sharing, live comments and chat, polls, and the ability to customize backgrounds, providing an immersive and interactive experience. The goal is to make remote meetings as smooth and engaging as in-person ones.

Responsibilities:

- Developed the application's user interfaces.
- Contributed to interactive features such as live chat, real-time comments, interactive polls, and video background customization for users.
- Contributed to maintaining and fixing the WebRTC integration for real-time video calls, including advanced features such as screen sharing, audio/video stream management, and meeting participant management.

Technologies: React (Frontend), Redux (state management), Docker (containerization), Firebase (real-time), Ant Design (design system), Git, Jira.

Team: PO, Scrum Master, Designer, Tech Lead, Full-Stack Developer, Frontend Developer.

Jan 2019 - May 2021 | GoMyCode**Full-Stack JavaScript Instructor**

- Designed and delivered interactive workshops on web technologies.
- Developed tailored teaching materials (presentations, hands-on exercises, projects).
- Introduced key concepts such as HTML, CSS, JavaScript, React, Node.js, and Express through concrete examples.
- Adapted content to participants' levels to ensure optimal progression.
- Trained and supported participants throughout their learning journey.
- Supervised practical work and provided technical and methodological support.
- Proposed exercises of increasing difficulty to reinforce fundamentals and explore advanced concepts.
- Applied formative assessment methods to track participants' progress in real time.
- Provided personalized, constructive feedback to each participant.

EDUCATION

December 2018 | Sfax: National Engineering Degree

Ecole Nationale d'Ingénieurs de Sfax (National School of Engineers of Sfax)

June 2015 | Sfax: Preparatory Cycle in Mathematics and Physics

Faculté des Sciences de Sfax (Faculty of Sciences of Sfax)

June 2012 | Sfax: Baccalaureate in Mathematics

Lycée Agareb 2

TECHNICAL SKILLS

Languages & Technologies: JavaScript, TypeScript, HTML, CSS, SCSS, Vite, Firebase, Supabase, Next.js, Hono.js, Prisma, Docker.

Frameworks: Vue.js, NestJS, Express.

Libraries: React, Redux, Redux Thunk, Vuex, Pinia, Shadcn, Tailwind CSS, Bootstrap.

Databases: PostgreSQL.

Collaboration Tools: Git, GitHub, GitLab
